Jérémie Ibanez

Fullstack web developer, I design dynamic, high-performance, and accessible interfaces using JavaScript, while building robust backends with Node.js.

Relevant Experience

Fullstack Web Developer · **Estech** Mai 2022 — Juillet 2024

- Designed and developed responsive and interactive web interfaces using JavaScript for internal applications and major automotive clients (Renault, Nissan). Built Single Page Applications (SPA) with modular components, advanced animations (drag & drop, carousels, dynamic forms…), and fine-tuned responsive design to ensure optimal user experience

- Contributed to the implementation of modular front-end architectures following SOLID principles and applying design patterns to ensure project scalability. Integrated RESTful APIs, optimized performance, and maintained legacy code with progressive refactoring to modern JavaScript. Worked closely with product teams, UX/UI designers, and project managers in an Agile environment.

- Developed reusable UI components and internal libraries to accelerate development cycles, improve consistency across applications and facilitate onboarding of new team members.

Sales Assistant · **Safran** Juillet 2018 — Avril 2020

- Managed a strategic client portfolio with personalized follow-up, coordinated logistics between suppliers and factories, and efficiently resolved disputes to ensure customer satisfaction and on-time delivery

Selected Projects

Spotify2mp3
I built an app that lets you convert your liked songs and playlists from Spotify into MP3 files for offline use. It uses the Spotify API combined with web scraping to find the tracks on YouTube, then downloads and converts them to MP3 using a Node.js script.

`React` `Node.js` `Express.js` `Vite.js` `Spotify API`

Online Whiteboard
I built a collaborative app where users can draw and share images in real-time on a shared whiteboard.
The app includes authentication, project (room) creation, and access control—only authorized users can join a room.
Within each room, users can create and join multiple "notes" (sub-whiteboards) to collaborate on different topics simultaneously

`Javascript` `Socket.io` `Tailwind.css` `Fabric.js`

Skills

Programming Languages
Javascript (ES6+), TypeScript, HTML, CSS, mySQL

Libraries & Frameworks
React, Vue.js, Next.js, Vite.js, Node.js, Express.js, Fabric.js, Tailwind CSS, Socket.io

Tools & Platforms
Git, Github, Gitlab, Heroku, Figma

Education

OpenClassRooms
RNCP 5 Web developer

Université Paris 8
Bachelor in Psychology

IFC Montpellier
BTS Sales and Tourism Productions

Soft Skills

Detail-oriented, proactive, stress management, interpersonal skills, teamwork

Languages

French : Native speaker
English : Fluent

Interests

Hiking, photography, science fiction & fantasy books, The Legend of Zelda: Breath of the Wild
